

KL1000 G3

Introducing the new KitLock KL1000 G3 cabinet lock. Key override and front battery change capabilities provide ease of use and peace of mind. The updated chrome effect back panel and handle finishes reflect their surroundings giving the lock a slimmer, more subtle aesthetic.

Sharing the same fittings & fixings as the KL1000 Classic, this lock is easily retrofitted, ideal for upgrading existing installations with increased flexibility and convenience for both guests and staff.

KEY OVERRIDE

Allows key holders to access the locker in the event of a forgotten code or an emergency. Override key available separately.

FRONT BATTERY CHANGE

The KL1000 G3 battery compartment can be accessed via the front of the lock. Entering a valid code and turning the handle reveals a security screw which, once removed, allows the cover to slide up and batteries to be replaced.

TECHNICAL SPECIFICATION

FEATURE	DESCRIPTION
Code Length	8 digit Master and Sub-Master Code, 6 digit Technician Code , 4 digit User Code

- Front battery change
- Key Override
- Battery Override
- Private and Public Functions
- Up to 20 User Codes
- Auto-unlock after a set time
- Slam latch accessory available
- Black Chrome / Silver Chrome finishes

FUNCTIONS

Private Function

This is used where the same code will be repeatedly used, e.g. an employee with a personal locker/drawer.

Public Function

This is the default function and is already pre-programmed in new locks. In this function the KitLock operates with a single User Code. The user enters a personal four digit code, this locks the lock. The same code is entered once only to open the lock and is automatically erased. The lock remains open ready for the next user. This function is used for short term, multiple occupancy applications.
