Keynius Wireless Smart Lock

➤ 'Leo' Pin-Code & RFID

With the new range of battery-operated locks, Keynius provide simple installation for new or retrofit projects. A high security keyless locking solution for lockers and cabinets using either Keypad or RFID functionality. The locks are surface mounted and supports companies with ease of use, secure locking solutions by eliminating key management problems and enhancing overall user experience.

The locks are stylish, easy to retrofit and competitively priced to offer great value for money. Using BLE (Bluetooth Low Energy) in combination with a smartphone or tablet connected to the Keynius cloud, all locks can be set, assigned and operated.

As administrator locks can be individually assigned, but also per locker wall or complete group. The Keynius Admin app gives full control and reporting options, with minimal effort.

Claiming and operating the locks is easy, making it perfect for flexible use occasions such as events and festivals.
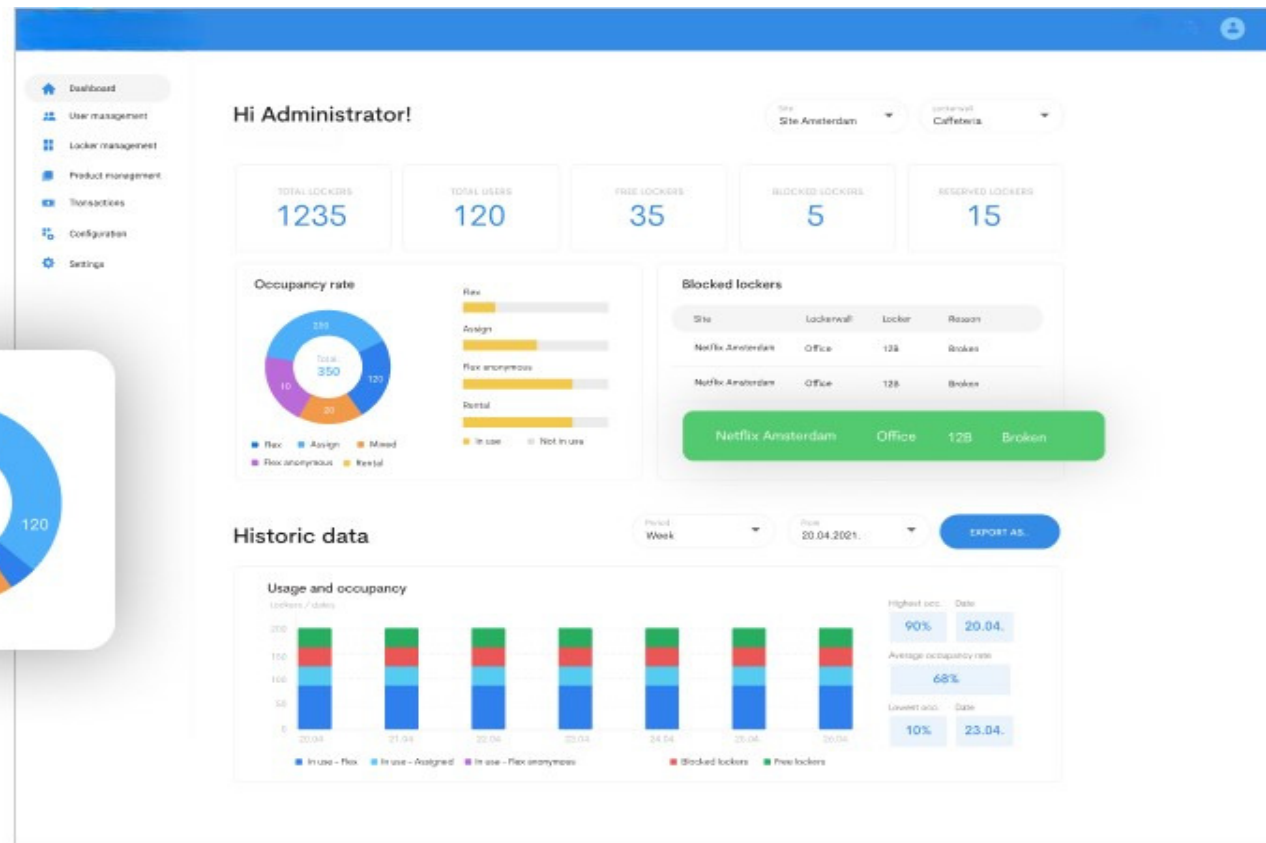

With the 'Leo' battery lock, reduction in facilities management costs, greater efficiency and control of storage units lies ahead.
